AMCAT: An 'Intelligent' Talent Assessment Tool

If you look closely, a paradox exists within the industry -- not only in the IT industry but in pretty much every vertical. On the one hand, the industry persistently complains about the dearth of skilled manpower, and on the other, an army of unemployed and under-employed youth in the country struggle to get jobs matching their skill-sets, explains Himanshu Aggarwal, director, [Aspiring Minds](#). The realisation led to the creation of AMCAT. As the name suggests, AMCAT is a test that fresh graduates can take up, any time of the year, to get an assessment of how their skills compare against those required for different jobs in the market. AMCAT is a computer-based test, and can be delivered in both online and offline environments to ensure that no infrastructural challenge restricts its reach, Aggarwal tells itmagz.com.
